AN OLD-FASHIONED ROAD TRIP

Williams Trivia began when gasoline cost less than $.30 per gallon, and the interstate highway system was piecemeal. So for this bonus, we invite you to join us on an old-fashioned road trip, on US Highways.

Each question consists of two pairs of cities/towns/locations found on a road map of the United States. Each pair is connected by exactly one US Highway (not an Interstate Highway); beware—sometimes pieces of some highways are invisible. Your answer will consist of two parts: A) The sum of the two highway numbers; and B) The name of the city/town/etc. (including state) where the two highways intersect (which will not necessarily be between the named towns). If the two highways overlap, any city/town/etc. along the overlapping stretch will be accepted.

Example: Marlborough, MA & Toledo, OH; St. Albans, VT & Danbury, CT. The two highways are US 20 & US 7, so your answer would be “27, Pittsfield, MA.”

Remember that your points are capped if you use online aids, such as MapQuest or Google Maps. On the other hand, an old-fashioned printed road atlas will prove useful, without invoking the points cap.
